

This portfolio presents evidence from real-work projects collected during my apprenticeship. I have done my best to relate the appropriate knowledge, skills and behaviours (KSB's) needed to each piece of evidence collected at the time. I have learned many things throughout the apprenticeship and gained many invaluable skills such as critical thinking, problem solving through programmatic means, improved presentation delivery and leadership skills in a business environment. Looking back at the apprenticeship as a whole there are moments that I think I would have done differently, such as:

1. I would have taken more opportunities to gain extra training/ courses outside of work.
2. I would have taken more advantage of what the university was offering, in terms of facilities and other means of help that they were offering.
3. Lastly, I would have made sure that I was a bit more ahead of schedule in regards to deadlines/ assignments.

This concludes my apprentice commentary. I confirm that the work attached to this portfolio is my own work.
